

Mysteries of Migration:

How do the birds find their way

About the Mountains, night and day,

How do they never lose their way?

How do they travel day and night?

How do they know they are right or wrong?

Don't they get confused by sound and light?

Or is sheer will their might?

Is it because of some magnetic force?

Or do they remember their ancient course?

Or do they have a sixth sense?

Or a telescopic lens?

These questions will make us ponder,

and make me think and wonder,

About magnificent power of the Creator

Who makes us realize that HE is the Monitor.

Dr. Thahira Iqbal
